Commutative Rank

Edmonds' Problem

Given a polynomial matrix $A(X_1, \ldots, X_n)$ with linear entries

$$A(\mathbf{X}) = A_1 X_1 + A_2 X_2 + \dots + A_n X_n \quad A_i \in \mathbb{C}^{s \times s}$$

Find the rank of $A(\mathbf{X})$ over $\mathbb{C}(\mathbf{X})$. Input parameter: n, s

¹can be solved using PIT oracle

Commutative rank approximation

Conclusion O

Rank increment step - Analysis

$$crk(A) = r \iff C - \sum_{t=0}^{s} BL^{t}D = 0$$
$$\iff C, BD, BLD, \dots, BL^{s}D = 0$$

Preliminary 00000 Commutative rank approximation

Conclusion

Rank increment step - Analysis

$$\operatorname{crk}(A) = r \iff C - \sum_{t=0}^{s} BL^{t}D = 0$$

 $\iff C, BD, BLD, \ldots, BL^{s}D = 0$

Bläser, Jindal, Pandey 2016:

$$C, BD, \dots, BL^{k-2}D = 0 \implies \operatorname{crk}(A) \le r(1+\frac{1}{k})$$

Preliminary 00000 Commutative rank approximation

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ● ●

Conclusion 0

Rank increment step - Analysis

$$\operatorname{crk}(A) = r \iff C - \sum_{t=0}^{s} BL^{t}D = 0$$

 $\iff C, BD, BLD, \dots, BL^sD = 0$

Bläser, Jindal, Pandey 2016:

$$C, BD, \dots, BL^{k-2}D = 0 \implies \operatorname{crk}(A) \le r(1 + \frac{1}{k})$$

Final Algorithm:

- Set $k = \frac{1}{\epsilon}$
- Check for $C, BD, \ldots, BL^{k-2}D = 0$. Output accordingly

Conclusion O

High level idea for non-commutative case

For $d \ge s + 1$, let Z_i be $d \times d$ variable matrices

 $\tilde{A}_d(\mathsf{Z}_1,\ldots,\mathsf{Z}_n)_{ds\times ds} := A_1 \otimes \mathsf{Z}_1 + \cdots + A_n \otimes \mathsf{Z}_n$

Commutative rank approximation

Conclusion

High level idea for non-commutative case

For
$$d \ge s + 1$$
, let Z_i be $d \times d$ variable matrices

$$ilde{\mathsf{A}}_{\mathsf{d}}(\mathsf{Z}_1,\ldots,\mathsf{Z}_n)_{\mathsf{ds} imes \mathsf{ds}} := \mathsf{A}_{\mathsf{1}} \otimes \mathsf{Z}_1 + \cdots + \mathsf{A}_{\mathsf{n}} \otimes \mathsf{Z}_{\mathsf{n}}$$

Theorem 2 (formal)

$$\operatorname{ncrk}(A(\mathbf{X})) = d \times \operatorname{ncrk}(\tilde{A}_d(\mathbf{Z}))$$

Preliminary 00000 Commutative rank approximation

Conclusion 0

High level idea for non-commutative case

Let $(\alpha_1, \ldots, \alpha_n) \in [\mathbb{C}^{d \times d}]^n$ be a witness assignment for rank r

Conclusion O

Substitution in Partially Commutative model

Given

$$\mathbf{X} = \mathbf{X}_1 \sqcup \cdots \sqcup \mathbf{X}_k$$

define

$$\tilde{A}(\mathbf{Z}) := \sum_{i=1}^{k} \sum_{\mathbf{x} \in \mathbf{X}_{i}} A_{\mathbf{X}} \otimes I_{d_{1}} \otimes \cdots \otimes I_{d_{i-1}} \otimes Z_{\mathbf{X}} \otimes I_{d_{i+1}} \otimes \cdots \otimes I_{d_{k}}$$

Commutative rank approximation
